Exploratory Testing for Charter IV

Session Participants

Kevin He 261167637 — kevin.he2@mail.mcgill.ca (Session lead)

Nathan Audegond 261171251 — nathan.audegond@mail.mcgill.ca (Session participant)

Eric Deng 261138815 — eric.deng@mail.mcgill.ca (Session participant)

Section 1: Session Summary

1.1: Session Charter

Identify capabilities and areas of potential instability of the "rest api todo list manager". Identify documented and undocumented "rest api todo list manager" capabilities. For each capability, create a script or small program to demonstrate the capability. Exercise each capability identified with data typical to the intended use of the application.

Session focus: Explore todos, projects and categories together (links, deletes, XML relationship payloads) to find orphaned or inconsistent data.

1.2: Version

Release version 1.5.5 of the Todo List Manager, running with profile version=3 (default data).

1.3: Set Up

Ubuntu 24.04 with Java 21. Requests were issued with curl from the session script so that every request can be replayed exactly; responses were captured in the session log. No Postman collection was used.

1.4: Build

Download from https://github.com/eviltester/thingifier/releases/tag/1.5.5 — runTodoManagerRestAPI-1.5.5.jar, started with: java -jar runTodoManagerRestAPI-1.5.5.jar (API and documentation at http://localhost:4567 and http://localhost:4567/docs).

Section 2: Session Notes

2.1: Session Date and Time

October 14, 2026. Duration: 45 minutes (timeboxed). Requests are numbered by step in Table 2 in the exact order they were run; the raw log preserves that order (curl logs do not carry per-request wall-clock times).

2.2: Exploration Notes

Table 1: Legend for request colours

Legend	
	As Expected
	Bug
	To Explore

Table 2: Session Notes taken during Exploratory Testing

Time	Endpoint Tested	Response	Reference File
Setup	**Run the application through the jar file** java -jar runTodoManagerRestAPI-1.5.5.jar	Application available at http://localhost:4567; default (profile version=3) data present.	runTodoManagerRestAPI-1.5.5.jar (course-provided; not included in this package)
Step 1	**Test API POST request** SETUP: POST /todos, POST /projects, POST /categories (one object each) Documented? DOCUMENTED Expected: 201 for each create	**Status 201: Created** Observed: HTTP 201 — Created todo=408, project=207, category=224 Result: **As Expected** Side note: Setup objects: todo=408, project=207, category=224 (ids from the log header; high ids reflect earlier sessions on the same server)	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 2	**Test API POST request** /projects/207/tasks body: {"id":"408"} Documented? DOCUMENTED Expected: 201: link todo 408 to project 207	**Status 201: Created** Observed: HTTP 201 — (empty response body) Result: **As Expected** Side note: Empty response body	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh

Time	Endpoint Tested	Response	Reference File
Step 3	**Test API GET request** /todos/408/tasksof Documented? DOCUMENTED Expected: 200 listing project 207	**Status 200: OK** Observed: HTTP 200 — {"projects":[{"id":"207","title":"interop project", "completed":"false","active":"false","description":"","tasks":[{"id":"408"}] }]} Result: **As Expected** Side note: Project <-> todo link confirmed two-way	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 4	**Test API POST request** /todos/408/categories body: {"id":"224"} Documented? DOCUMENTED Expected: 201: link category 224 to todo 408	**Status 201: Created** Observed: HTTP 201 — (empty response body) Result: **As Expected** Side note: Empty response body	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 5	**Test API GET request** /categories/224/todos Documented? DOCUMENTED Expected: Todo 408 should be listed for category 224	**Status 200: OK** Observed: HTTP 200 — {"todos":[]} Result: **Bug** Side note: BUG-01: empty list — link stored one way only	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 6	**Test API POST request** /todos/408/categories body: <category><id>224</id></category> Documented? DOCUMENTED Expected: 201: XML payloads are supported for all operations	**Status 404: Not Found** Observed: HTTP 404 — {"errorMessages":["Could not find thing matching value for id"]} Result: **Bug** Side note: BUG-12: 404 "could not find thing matching value for id" Format: XML request; log evidence	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 7	**Test API DELETE request** /categories/224 Documented? DOCUMENTED Expected: 200: category deleted	**Status 200: OK** Observed: HTTP 200 — (empty response body) Result: **As Expected**	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 8	**Test API GET request** /todos/408/categories Documented? DOCUMENTED Expected: Empty list: the category no longer exists	**Status 200: OK** Observed: HTTP 200 — {"categories":[{"id":"224","title":"interop category","description":""}]} Result: **Bug** Side note: BUG-10: deleted category 224 still listed on the todo, with its title	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 9	**Test API DELETE request** /todos/408 Documented? DOCUMENTED Expected: 200: todo deleted (cleanup)	**Status 200: OK** Observed: HTTP 200 — (empty response body) Result: **As Expected**	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Step 10	**Test API DELETE request** /projects/207 Documented? DOCUMENTED Expected: 200: project deleted (cleanup)	**Status 200: OK** Observed: HTTP 200 — (empty response body) Result: **As Expected**	logs/exploratory_session4_interoperability.log exploratory/session4_interoperability.sh
Close	**Review findings and cross-reference bugs**	Findings, concerns, risks and new test ideas reviewed and recorded in Section 4; bugs entered in bug_reports.md with the same BUG numbers used there.	bug_reports.md

Section 3: Referenced Files (Scripts, Programs, Screen Shots, Video Clips, Spreadsheets, etc)

Table 3: Descriptions of Referenced Files and Created Scripts

File Name	Description
exploratory/session4_interoperability.sh	Curl capability script used in this session: demonstrates every capability exercised, in order. Shared helper: exploratory/common.sh.
logs/exploratory_session4_interoperability.log	Raw session log: the exact status code and response body of every request in Table 2, in step order. This log is the evidence for the Response column (no screenshots were taken; the log is replayable via the script).
session_notes/CH4_Interoperability_Notes.pdf	This session-notes document. The teacher-template data is contained in this PDF itself: participant/charter information in Section 1, the per-request method, method type, documented status, expected behaviour, expected-vs-observed verdict, observed behaviour, side notes and XML/evidence details in Section 2, and the summary of findings, concerns and test ideas in Section 4.
bug_reports.md	Consolidated bug form and the full bug reports (summary, description, impact, steps to reproduce) for the bugs in Table 4.
tests/test_interoperability_api.py, tests/test_bugs_expected_behavior.py, tests/test_bugs_actual_behavior.py	Unit tests created from this session's findings, including the expected-behaviour / actual-behaviour pairs for each numbered bug.
Part_A_Report.pdf	Final Part A report: deliverables, findings, suite structure and repository description.

Section 4: Summary of Session Findings

4.1 Summary of Session Findings

Capabilities identified:

- A todo can belong to several projects and categories at once; project <-> todo links are two-way — partly documented.
- Deleting a todo or project removes project <-> todo links; deleting objects never cascades to the other side's objects.
- Relationship creation from JSON bodies on all three entity pairs.

What was tried:

Create one todo, project and category; link todo to project and read back from the todo side; link todo to category and read back from the category side; create the same relationship with an XML body; delete the category and re-read the todo; delete the todo and project (cleanup).

What we learned:

- Project <-> todo links are genuinely bidirectional.
- Todo -> category links are one-way: the category side stays empty (BUG-01).
- Creating a relationship with an XML body returns 404 while the same link by JSON returns 201 (BUG-12).
- Deleting a category leaves a ghost link on the todo: the deleted category is still listed, with its title (BUG-10). The mirror case (deleted todo on a category) is BUG-11.
- Changing a todo's doneStatus does not affect its project's completed flag (checked in the unit suite).

Decisions made:

- Always inspect both ends of a link after every delete.
- Create all objects inside the session/tests so default data is never mutated.
- The /shutdown endpoint (swagger only) was deliberately NOT executed: it would stop the service under test.

Table 4: Descriptions of Identified Bugs

Bug	Description
BUG-01 — Todo→category link is not visible from the category side	POST /todos/408/categories {"id":"224"} returns 201, but GET /categories/224/todos returns an empty list. The category side never sees the link.
BUG-12 — Relationship creation fails when the id is sent as XML	POST /todos/408/categories with <category><id>224</id></category> returns 404 “Could not find thing matching value for id”, while the identical JSON request returns 201. XML clients cannot create relationships although XML is advertised for all payloads.
BUG-10 — Deleting a category leaves a ghost link on the todo	After DELETE /categories/224 returns 200, GET /todos/408/categories still lists category 224 with its title, although GET /categories/224 is 404. Referential integrity is broken and deleted data remains exposed.
BUG-11 — Mirror ghost link (confirmed in follow-up unit tests)	Deleting a todo likewise leaves it listed on its category (GET /categories/{id}/todos). Found by turning this session’s ghost-link probe into the paired bug tests in the unit suite.

4.2 Concerns Identified in Session / Areas of Potential Risk

- BUG-01, BUG-10, BUG-11, BUG-12.
- Referential integrity is not enforced for category links: ghost links expose deleted data (privacy) and break clients that dereference them.
- XML clients cannot create relationships at all, although XML is advertised for all payloads.

4.3 New Testing Ideas Identified in Session

- Delete then re-create an object with the same title and re-check links.
- Link cycles (todo <-> project <-> category).
- Stress with many links per object.
- Repeat the ghost-link probes for project <-> todo links in XML.
